Secure Offline P2P Messaging & Friend Finder

By LGTM Team

syna

Team Introduction

Rafael

Networking & Security

- Nearby Connections API integration
- P2P discovery
- Device handshake
- Public-key encryption
- Background GPS sensor streams

Skills & Experience

Low-level programming · DSA

Andrew

Backend & Business Logic

- Room schema architecture
- Profile & contact CRUD
- Message persistence
- QR key management
- Distance and bearing mathematical logic

Skills & Experience

DBMS · Backend engineering

Ahsan

Frontend & UI/UX

- Jetpack Compose screens
- QR scanner UI
- Chat interface
- Offline MapLibre integration
- Animated compass radar UI

Skills & Experience

Frontend Development
Design and project management

syna

Motivation & pain points

No signal.
Where is everyone?

Zero internet coverage.

Hiking, festivals, or natural disasters sever standard cellular connectivity.

Location sharing stops working.

No internet, no location updates.

Friends are hard to find.

No intuitive visual directional guidance.

syna

The solution

Syna: Off-grid connectivity.

Offline P2P Chat

Encrypted direct messages between nearby Android devices

Local Map Logs

Offline maps with locally saved, last-known friend locations

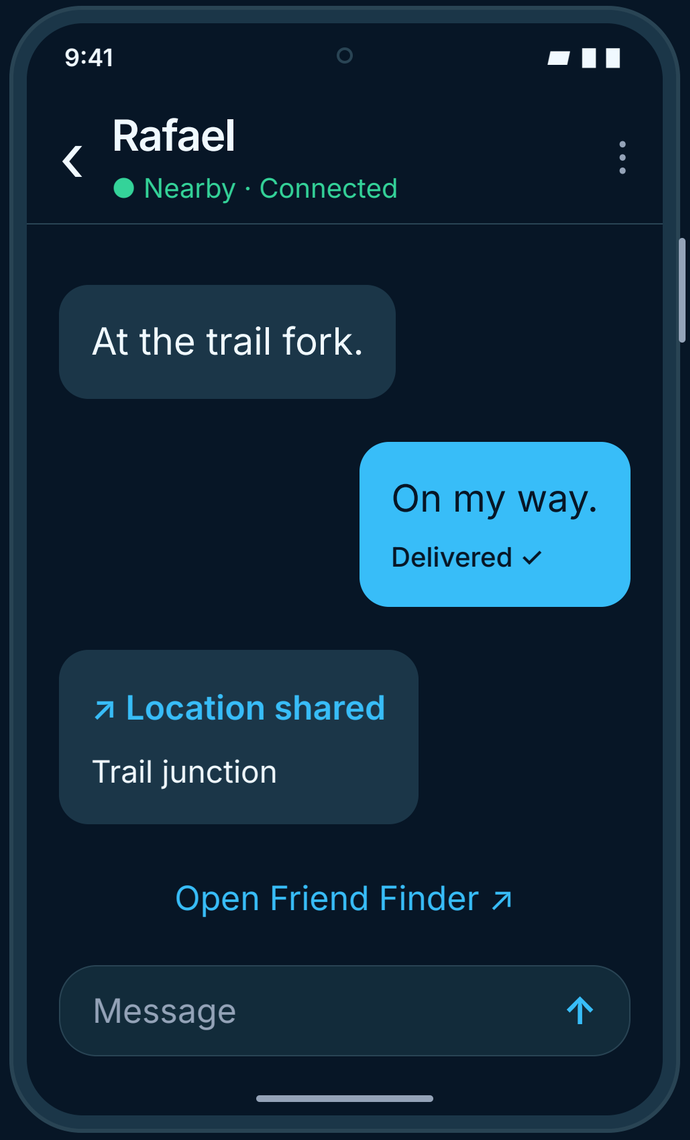

Radar Compass View

360° Friend Finder with directional edge glow

syna

Offline?
Keep the conversation going.

- Direct to your friend.
- Encrypted in transit.
- Saved on your phone.

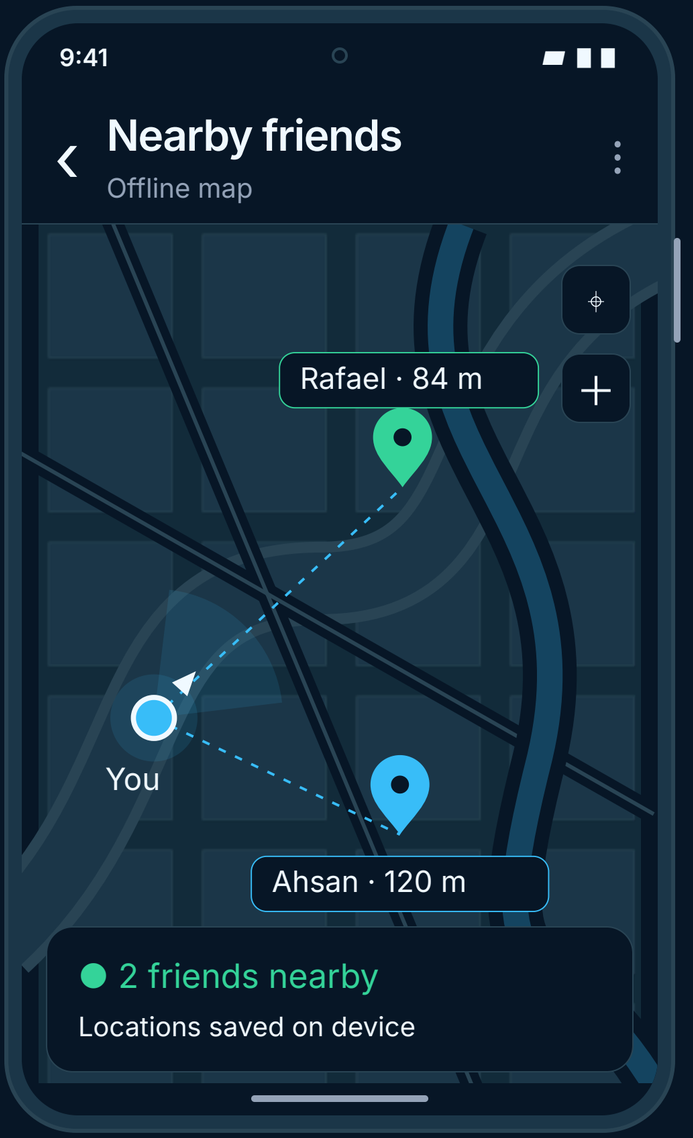

syna

See who’s nearby.

Nearby Connections API

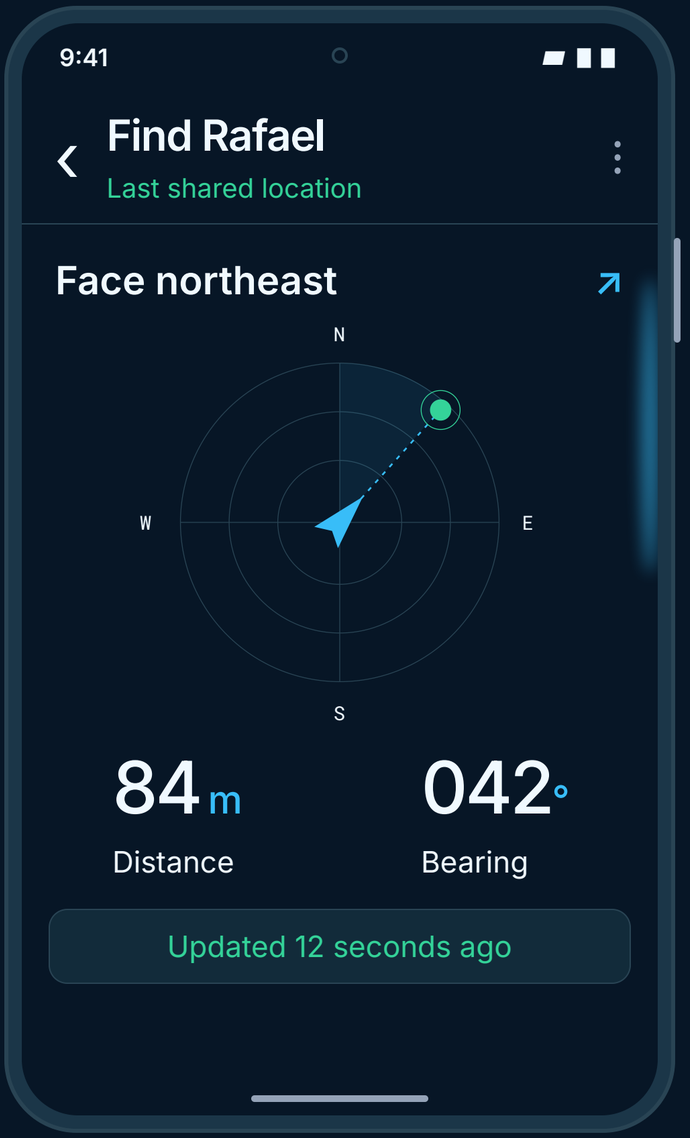

- Friends + distance.
- Your position + heading.
- Maps without internet.

syna

Find your friends. Know which way.

- Turn toward the glow.
- Read distance + bearing.
- Check location freshness.

syna

More than an offline message.

Feature Dimension	Messaging-first P2P Apps	Syna P2P Radar & Chat
Primary Focus	Text broadcasting & crisis messages	Offline P2P chat + directional friend finding
UI Experience	Standard 2D chat list view	Dynamic 360° Compass Radar View
Sensor Scope	Bluetooth / Wi-Fi radios	GPS Hardware + Magnetometer
Data CRUD Scope	Store & forward messages	Local chat storage + last-known coordinates

syna

Two devices.
One direct connection.

Your Android

Jetpack Compose + Material 3
Interface

Kotlin · MVVM
Application logic

Room (SQLite) + Keystore
Local data · Private keys

Nearby Connections
(Google API)

Encrypted P2P

Friend’s Android

Same local stack

syna

Tech stack & resources

Requirements

P2P transport

Nearby Connections API

Wi-Fi · Bluetooth · BLE

Security & QR

Android Keystore

ECDH key exchange (planned)
ZXing / ML Kit QR scanner

Local database

Room (SQLite)

Profiles · chats · contacts · waypoints

Offline mapping

MapLibre SDK

Prepackaged offline tiles

Sensors & radar

GPS · Android Location Services

Rotation Vector Sensor
Compose Canvas · Ambient edge glow

Build & test

Android Studio · Git / GitHub

Two physical Android phones

syna

Project Plan

Build first

Identity + contacts

Encrypted 1:1 chat

Offline map + compass

Beyond this MVP

Mesh relaying

Groups + file sharing

Calls + cloud sync

Nearby range required. Last locations stay saved.

syna

4-Week Implementation Plan

WEEK 1 · Nov 4–10

Foundation

- Project architecture
- Room schema
- Wireframes
- Raw offline P2P payload exchange test

WEEK 2 · Nov 11–17

Messaging

- QR identity exchange
- Authenticated encrypted chat
- Local Room persistence
- Contact CRUD

WEEK 3 · Nov 18–24

Location

- GPS sharing stream
- MapLibre tile loading
- Distance/bearing math
- Compass Radar view

WEEK 4 · Nov 25–Dec 1

Integration

- End-to-end testing
- Error handling
- Permission edge cases
- Live demo stabilization

syna

Thank You

Stay connected. Find each other. Even offline.

LGTM Team
